

Summary:

Public health surveillance data indicates levels of influenza like illness (ILI) is similar to the statewide average and well above the pre-pandemic historical average for emergency department (ED) visits (Figure 1). LI ED visits are found in most of the county's zip codes with the highest levels found in the Homer (44235) and Litchfield (44253) zip codes (Figure 2). The highest frequency of ILI ED visits are among those less than 25 years of age (Figure 4). There were 0 influenza-associated hospitalizations which is similar to the pre-pandemic historical average (Figure 3). There were 0 novel influenza infections reported during the week. The number of over the counter (OTC) adult medication sales decreased while the number of children's medication sales increased compared to the previous week (Figures 5 and 6).

Dashboard:

Indicator	Current Week	Previous Week	Trend (# of weeks)	Season to Date
Number of ILI ED visits ¹	38	33	↑ 1	137
Percentage of ILI ED visits ¹	3%	2.3%	↑ 1	-
Number of Influenza Hospitalizations ²	1	1	↔ 1	2
Number of Novel Influenza Infections ²	0	0	↔ 3	0
Number of Over-the-Counter ³ Medication Sales (Adult)*	1,676	1,910	↓ 3	7,448
Number of Over-the-Counter ³ Medication Sales (Children)*	159	135	↑ 1	610
Number of Influenza Deaths	0	0	↔ 3	0
Number of Pneumonia Deaths	0	0	↔ 1	1

Over-the-counter (OTC) medication sales do not reflect all OTC medication sales within the county. Please see Figures 5 and 6 for specific medications that are being tracked and monitored. All numbers are preliminary and subject to change.

State, Regional, and National Data:

Ohio Surveillance Data:

- The U.S. World Health Organization (WHO) Collaborating Laboratories System and the National Respiratory and Enteric Virus Surveillance System (NREVSS) has reported 11,401 tests for influenza performed at participating facilities; of these, 32 tested positive for influenza A(H1N1pdm09), 108 for influenza A(H3N2), 206 for influenza A (subtyping not performed), and 15 for influenza B (through 10/30/2022).
- No pediatric influenza-associated mortalities have been reported so far during the 2022-2023 influenza season (through 10/30/2022).
- No novel influenza A virus infections have been reported so far during the 2022-2023 influenza season (through 10/30/2022).
- Incidence of confirmed influenza-associated hospitalizations in 2022-2023 season = 211 (through 10/30/2022).

HHS Regional and National Surveillance Data*:

- During week 42 (October 16th – October 22nd, 2022), the percentage of outpatient visits for influenza-like illness (ILI) in Region 5 (Ohio is in Region 5) was 2.5%, which is at the regional baseline of 2.5%.
- During week 42 (October 16th – October 22nd, 2022), most U.S. states reported Minimal or Low activity, though some states are reporting Moderate, High, or Very High activity. The percentage of outpatient visits for ILI was 3.3%, which is above the national baseline of 2.5%. Seven of 10 HHS regions reported ILI levels above their region-specific baseline level.

*National-level and regional-level data are reported one week later than Ohio state-level.

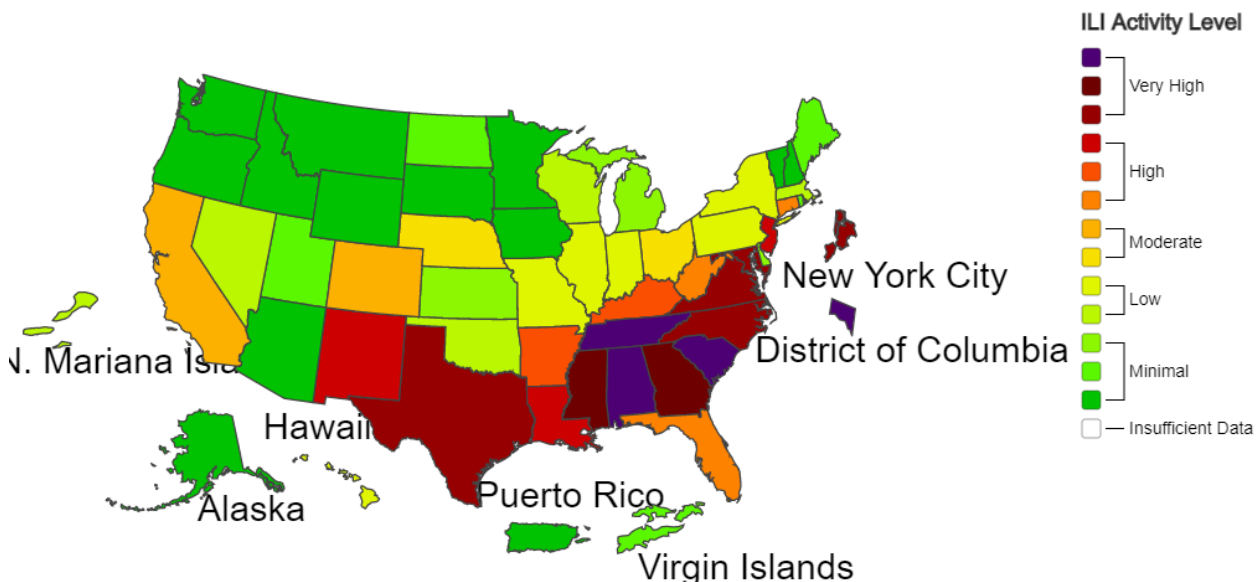

A Weekly Influenza Surveillance Report Prepared by the Influenza Division

Outpatient Respiratory Illness Activity Map Determined by Data Reported to ILINet

This system monitors visits for respiratory illness that includes fever plus a cough or sore throat, also referred to as ILI, not laboratory confirmed influenza and may capture patient visits due to other respiratory pathogens that cause similar symptoms.

2022-23 Influenza Season Week 43 ending Oct 29, 2022

Data Sources:

- 1. Emergency Department Visits (EpiCenter):** EpiCenter collects emergency department chief complaint data from hospitals and urgent care facilities across Medina County and classifies them into symptom and syndrome categories. Rates for chief complaints regarding fever + ILI and other symptoms commonly detected during the flu season are analyzed.
- 2. Influenza-Associated Hospitalizations (ODRS):** Influenza-associated hospitalizations and novel influenza infections are reported by the Medina County Health Department and hospitals using the Ohio Disease Reporting System (ODRS). Hospitalizations can be used as an indicator of the severity of illness during a particular influenza season. This condition became reportable in January 2009.
- 3. National Retail Data Monitor (NRDM):** NRDM collects over-the-counter medication sales at drug stores located within Medina County. Medication sales are broken down by adult and pediatric.
