

# Influenza Activity Report

## Influenza Activity in Medina County: April 29 – May 19, 2018 *(Last Report of Season)*

### Summary:

Public health surveillance data indicates levels of influenza like illness (ILI) are trending downward and returning to historical averages for Medina County. The percentage of ILI emergency department (ED) visits among Medina County residents are similar to statewide levels (Figure 1). The geographic distribution of ILI ED visits is sporadic with influenza activity found in about half of the county's zip codes (Figure 2). There were 4 influenza-associated hospitalizations and 0 novel influenza infections reported to the Medina County Health Department during weeks 18 to 20. The incidence of influenza associated hospitalizations is slightly above the average (Figure 3). The frequency of ILI associated hospitalizations is highest among adults age 65 or older while the highest frequency of ILI ED visits is among children less than 18 years of age (Figure 4). Thirty-one deaths associated with influenza or pneumonia have occurred since the beginning of the influenza season.

### Dashboard:

Indicator	Current Week*	Previous Week*	Trend (# of weeks)	Season to Date
Number of ILI ED visits <sup>1</sup>	21	17	 1	1,069
Percentage of ILI ED visits <sup>1</sup>	1.5%	1.1%	 1	-
Number of Influenza Hospitalizations <sup>2</sup>	2	0	 1	271
Number of Novel Influenza Infections <sup>2</sup>	0	0	 32	0
Number of Deaths Associated with Influenza or Pneumonia <sup>3</sup>				31

\*Current and previous week data includes only weeks 20 and 19 for comparison. Season to date has been updated to reflect cumulative totals up to week 20.\*

## State, Regional, and National Data:

### Ohio Surveillance Data:

- **ODH lab** has reported **1241** influenza tests from specimens sent from various submitters. 2017-2018 influenza season positive results: **(683) A/H3N2; (105) A/pdmH1N1; (201) Influenza B;** (through 05/19/2018).
- The **National Respiratory and Enteric Virus Surveillance System (NREVSS)** has reported **81,391** influenza tests performed at participating facilities. 2017-2018 influenza season positive results: **(209) H1N1, (644) A/H3N2, (11,384) Flu A Not Subtyped, and (4551) Flu B** (through 05/19/2018).
- **4 pediatric influenza-associated mortalities** have been reported during the 2017-2018 season (through 05/19/2018).
- No **novel influenza A virus infections** have been reported during the 2017-2018 season (through 05/19/2018).
- Incidence of confirmed **influenza-associated hospitalizations** in 2017-2018 season = **17,397\*** (through 05/19/2018).

**Regional Surveillance Data\*\*:** During week 19 (May 6th – May 12th, 2018), the proportion of outpatient visits for ILI in Region 5 (Ohio is in Region 5) was 0.96%, which is above the regional baseline of 1.8%. Kentucky reported Regional Activity; Ohio and Michigan Local Activity; West Virginia, Pennsylvania, and Indiana reported Sporadic Activity.

**National Surveillance Data\*:** During week 19 (May 6th – May 12th, 2018), most U.S. states reported Minimal or Low influenza activity. The proportion of outpatient visits for ILI was 1.2%, which is **below** the national baseline of 2.2%. All 10 regions reported ILI at or above their region-specific baseline level. The most frequently identified influenza virus type reported by public health laboratories was **influenza B**.

\*National-level and regional-level data are reported one week later than Ohio state-level.

## Data Sources:

- Emergency Department Visits (EpiCenter):** EpiCenter collects emergency department chief complaint data from hospitals and urgent care facilities across Medina County and classifies them into symptom and syndrome categories. Rates for chief complaints regarding fever + ILI and other symptoms commonly detected during the flu season are analyzed.
- Influenza-Associated Hospitalizations (ODRS):** Influenza-associated hospitalizations and novel influenza infections are reported by the Medina County Health Department and hospitals using the Ohio Disease Reporting System (ODRS). Hospitalizations can be used as an indicator of the severity of illness during a particular influenza season. This condition became reportable in January 2009.
- Office of Vital Statistics:** The Medina County Health Department Office of Vital Statistics receives reports on the causes of death that occur within the county. Deaths are counted as influenza or pneumonia deaths if they are listed as the immediate or underlying cause on the death certificate.
